### **STATEMENT OF COMPLIANCE**

The European Commission directive **1895/2005/EC** "**Restricting the use of certain epoxy derivatives in materials and articles intended to come into contact with food**", sets revised migration limits for BADGE and its hydrolysis and chlorohydrin reaction products as follows:-

***For BADGE, BADGE.H<sub>2</sub>O and BADGE.2H<sub>2</sub>O - the group SML (Specific Migration Limit) is 9mg/kg of food.***

***For BADGE.H<sub>2</sub>OHCl, BADGE.HCl and BADGE.2HCl - the group SML is 1mg/kg of food.***

***The use of NOGE and BFDGE is not permitted.***

The level of migrating species from a lacquer is dependant upon the application and curing conditions over which PPG has no control. However we hereby declare that

#### **1005 Epoxy Lining**

When applied and cured following our recommendations on our datasheets, will give levels of migrating species within the limits set in **1895/2005/EC**, consequently we believe this product to be compliant to this directive.
